

Galileo Achieves Development Milestone in Spain with 700 MW of Grid-Secured Projects

Zurich/Madrid, 12 May 2026 – Galileo is announcing a significant milestone in its renewable energy development activities in Spain, having now reached 700 MW of grid-secured projects across the country. Providing strong optionality and market access, the achievement marks an important step forward in the company’s mission to accelerate Spain’s energy transition and strengthen regional energy security.

The company’s broader active development pipeline totals 1.4 GW, spanning battery energy storage systems (BESS), photovoltaic (PV) hybrid solutions, and onshore wind projects. This diversified portfolio reflects Galileo’s strategic focus on integrating complementary technologies to enhance grid flexibility, support renewable integration, and deliver a stable energy supply. An additional 1.4 GW of pipeline projects relate to capacity tenders that are anticipated to take place in Spain over the coming years.

As Spain continues to pursue its decarbonisation targets, the rapid deployment of renewable energy and storage infrastructure remains critical. The importance of energy security has also come into even sharper focus with the ongoing instability in the Middle East, and by developing a robust pipeline of locally generated renewable energy projects, Galileo is helping to enhance Spain’s energy independence and resilience.

“Reaching 700 MW of grid-secured projects is a major achievement for our team and demonstrates the significant progress we have made in Spain”, commented Eduardo González Solá, Galileo’s Director of Business Development & Power Origination for Spain. “Composed primarily of BESS standalone projects, concentrated in large consumption areas in Catalonia and Madrid, as well as onshore wind and PV assets, this pipeline of projects is both well-progressed and technologically well-diversified.”

Ingmar Wilhelm, Co-founder and CEO of Galileo, added: “Galileo is well-positioned in Spain for the future with a strong, diversified pipeline and a highly experienced team. Galileo aims to obtain consent for a large portion of this 700 MW of grid-secured projects and looks forward to reaching multiple final investment decisions for this attractive portfolio by the end of 2026.”

About Galileo

At Galileo, we are delivering long-term green power solutions to energy-hungry customers. As a pan-European renewable energy developer and independent power producer (IPP), we provide affordable clean energy for today, and tomorrow.

Strengthening Europe's energy competitiveness, improving energy security and realising a sustainable future, our teams are delivering a 17 GW pipeline of solar, storage, onshore and offshore wind across multiple European countries.

Collaboration is crucial and we are working closely together with landowners, local communities and developers to accelerate the energy transition at the pace needed. Embracing 15 nationalities, we promote equality, diversity, and inclusion. Sustainability underpins everything we do, and we are actively contributing to the UN 2030 Agenda for Sustainable Development.

Galileo has the long-term backing of four institutional investors with combined AUM (Assets Under Management) of over EUR 100 billion.
