

Galileo Energies Nouvelles Advances 630 MW French Pipeline with New Wind, Solar, Agrivoltaic and Storage Projects

Zurich and Carhaix, 25 June 2026 – Galileo Energies Nouvelles is accelerating development of its active pipeline of over 630 MW, comprising solar photovoltaic, onshore wind and battery energy storage system (BESS) projects, confirming the maturing of the company’s multi-technology portfolio across France.

Galileo Energies Nouvelles, part of the Galileo Group, will submit planning applications for six onshore wind projects totalling 89 MW and five agrivoltaic projects totalling 69 MWp, in the next three months. In addition, the public consultation for the 3.25 MWp Goasorguen solar project began in May, reflecting the company’s continued growth and momentum.

Looking ahead to 2027, construction is anticipated to begin on a 7 MWp ground-mounted solar project and a 5 MW wind project. Additionally, a second wind project that will be progressed with a co-development partner has recently obtained all necessary environmental authorisations, thereby enabling it to proceed. These represent further milestones for Galileo Energies Nouvelles and its activities across France.

Galileo’s development pipeline in France totals over 630 MW, comprising 241 MWp of solar projects, 270 MW of onshore wind and 120 MW of BESS projects. This technological diversification is part of the company’s strategy to develop complementary solutions capable of supporting the full integration of renewable energy.

Against the backdrop of an accelerating energy transition and a drive to increase energy security, the development of local renewable energy generation is crucial for strengthening the energy resilience of both France and Europe.

“Over the coming months, we are entering a highly active phase in France with planning applications for six new onshore wind and five agrivoltaic projects and are also preparing for construction of a wind project and a solar project”, said Pauline Caro, Managing Director of Galileo Energies Nouvelles. “Reflecting the hard work of our expert teams, we have a solid foundation on which to progress development of our diversified portfolio and advance the country’s energy transition.”

Ingmar Wilhelm, co-founder and CEO of Galileo, added: “With an accelerating development pipeline of more than 630 MW across solar, onshore wind and BESS projects in France, Galileo Energies Nouvelles is becoming a strong and diversified renewable energy platform that will make a meaningful contribution to supplying customers with green electricity and enhancing energy resilience for both France and Europe.”

About Galileo

At Galileo, we are delivering long-term green power solutions to energy-hungry customers. As a pan-European renewable energy developer and independent power producer (IPP), we provide affordable clean energy for today, and tomorrow.

Strengthening Europe's energy competitiveness, improving energy security and realising a sustainable future, our teams are delivering a 17 GW pipeline of solar, storage, onshore and offshore wind across multiple European countries.

Collaboration is crucial and we are working closely together with landowners, local communities and developers to accelerate the energy transition at the pace needed. Embracing 15 nationalities, we promote equality, diversity, and inclusion. Sustainability underpins everything we do, and we are actively contributing to the UN 2030 Agenda for Sustainable Development.

Galileo has the long-term backing of four institutional investors with combined AUM (Assets Under Management) of over EUR 100 billion.
